Education

Bachelor in computer science and mathematics | MAY. 2027 | UNIVERSITY OF OTTAWA

- Awarded university of Ottawa international scholarship for high school academic excellence
- Good academic standing

Skills

- Programming languages: Python, Java, PHP, Go, ProLog.
- Front-end development tools: Javascript, CSS, HTML
- Developer tools: GitHub actions, Google cloud, Firebase, Android studio, Eclipse, Notepad++, VS Code
- Databases: PostgreSQL, MySQL
- Data visualization tools: PowerBI, Tableau
- Languages: French (native), English (Professional)

Projects

Road traffic lights simulation (Python, Arduino kit, Electrical board)

In the high school tech club, I created a traffic lights simulation using programming implementation and Arduino tools, and manually constructing the platform used as a road on which we placed the lights to simulate.

Service Novigrad (Android studio, Java, Firebase, UML)

Built an app using android studio and firebase database with my team. Different type of users log in/sign in to the app and are automatically saved into the database. They can ask for a specific service available on the app and which employee is delivering it. After the emperors the service, the client can give reviews.

Major League Hacking Hackathon (Java)

Built a Blockchain simulation program using Java. It takes a chain of transaction blocks and store them in a secured manner by hashing each block transaction and attaching the previous block hash to the next block. [https://](https://github.com/AshleyKeliane/Blockchain_simulation_java/tree/master)
